

Dam Safety for Owners, Practitioners and Regulators

Navigating Dam Safety in a Time of Change – New Regulations, Climate and Technology

The 2023 Dam Safety Training Course, held on 9-10 May at Engineering New Zealand in Wellington, brought together professionals from various sectors of our dam safety industry. With a focus on navigating the evolving landscape of dam safety, this event provided invaluable insights into the new regulations, climate considerations, and technological advancements shaping the industry.

We received an overwhelming response and were fully subscribed with 37 participants from diverse backgrounds, including owners, practitioners, regional authorities, and government who gathered to collaborate, share knowledge, and foster professional growth.

This enthusiastic engagement underscores the industry's commitment to maintaining high safety standards and staying up to date with the latest developments.

The training content was carefully crafted to address the specific needs of attendees, with particular attention given to the 2022 Dam Safety Regulations, commencing 13 May 2024. Industry specialists, including eight external trainers, along with our experienced DSI team, delivered comprehensive learning sessions that equipped participants with the tools and understanding necessary to navigate the new regulatory environment effectively.

Beyond the valuable educational opportunities, participants also connected and networked during the event and a lively social function. We believe that building relationships and connections within the dam safety community is crucial for long-term collaboration and support.

The success of the event can be attributed to the expertise of our trainers, the active participation of attendees, and our commitment to providing a top-quality learning experience tailored to the unique requirements of our industry. We extend our appreciation to all the attendees, trainers, and partners who contributed to the success of the 2023 Dam Safety Training Course.

For those who were unable to attend, we are excited to announce that a repeat course will be offered on **28-29 February 2024**. Given recent demand, we strongly encourage early registration.
