

DSI has one of NZ's First Dam Safety Recognised Engineers

Dan Forster, DSI's General Manager and a Principal Dam Safety Engineer, recently became one of NZ's first Dam Safety Recognised Engineers. Dan has both types of Recognised Engineer registrations – Potential Impact Classification (PIC) Recognised Engineer, and Dam Safety Assurance Programme (DSAP) Recognised Engineer.

Recognised Engineers provide a key role in Aotearoa NZ's Dam Safety Regulations to certify and audit dam owners' dam classifications, dam safety assurance programmes and annual compliance. Dan is closely familiar with the NZ Dam Safety Regulations as he was a technical advisor to MBIE during the regulations' development.

If you own a dam, Dam Safety Intelligence would be pleased to support you to prepare for complying with the [Dam Safety Regulations](#). We encourage Recognised Engineer involvement early in your preparation, to support effective business processes for your dam certifications and audits. [Contact us](#) or send us a message to find out more today.
